ADDISI NICHOLAS HISRICH

+233 545 916 652 • addisinicholas@gmail.com • hisrich.netlify.app • github.com/Hisrich

PROFESSIONAL SUMMARY

Veterinary Doctor and software engineer with hands-on experience building backend applications, machine learning solutions and laboratory information systems. Experienced in Python, Flask, Django, SQL, data analysis, machine learning, REST APIs and cloud deployment. Developed and deployed software for veterinary services and contributed to the digitization of laboratory workflows. Interested in software engineering, AI/ML, data systems and technology solutions for healthcare and veterinary applications.

EDUCATION

Kwame Nkrumah University of Science and Technology (KNUST), Kumasi, Ghana **Sept 2025**
Doctor of Veterinary Medicine | CWA: 73.16/100
Thesis: Seroprevalence of *Leptospira Spp.* in Hunting Dogs in the Ashanti and Northern Regions of Ghana
Relevant Coursework: Algebra, Statistics, Epidemiology, Virology, Pathology, Immunology

PROFESSIONAL EXPERIENCE

National Food Safety Laboratory (NFSL), Accra **Jan 2026 – Sept 2026**
Veterinary Doctor | Software & Laboratory Systems

- Provided veterinary and laboratory support within the National Food Safety Laboratory while contributing to day-to-day food-safety operations.
- Collaborated with the Data Manager to digitize Excel-based laboratory workflows into an internal system covering inventory, sample reception, media preparation, and bacteriology.

Thrive Africa, Remote **Jun 2025 - Sep 2025**
ML/AI Engineer Intern

- Built and optimized ML models, improved data pipelines and supported impactful projects in the Ghanaian market.
- Contributed to data preparation, model development, evaluation and improvement of machine-learning workflows.

InternPulse, Remote **Jan 2025 - Mar 2025**
Backend Developer Intern

- Built a secure Flask payment API integrating Paystack and authored API documentation.
- Worked on backend application development and API integration using Python and Flask.

TECHNICAL PROJECTS

Laboratory Management System — National Food Safety Laboratory
Private / Internal System

- Contributed to a web-based Laboratory Management System designed to replace fragmented Excel-based laboratory workflows.
- Helped develop and migrate workflows for laboratory inventory, sample reception, media preparation and bacteriology.
- Applied backend and database development principles to improve organization and management of laboratory records and operational data.
- Source code and system details are private due to organizational confidentiality.

Job Hunt Bot — Automated Job Discovery System

Python, SQLAlchemy, SQLite/PostgreSQL, Telegram, REST APIs

- Built a Python-based job discovery system that collects technology job listings, evaluates their relevance, and delivers matched opportunities through Telegram.
- Implemented a SQLAlchemy database layer with CRUD operations, job deduplication, status tracking, and filtering by location, remote status, and match score.
- Developed job collectors and automated scoring, scheduled searches, Telegram notifications and pipeline orchestration using LinkedIn job-alert emails, RemoteOK and We Work Remotely.
- GitHub: https://github.com/Hisrich/Job_Hunt_Bot

Hellybert Veterinary Services Website — Client Project

Full-Stack Web Development | Deployed on Render

- Designed and developed a production veterinary services website for a client, covering home veterinary care, vaccinations, senior pet care, services, booking and contact workflows.
- Built and deployed the client-facing platform based on the client's service requirements.
- Live: https://hellybert-website.onrender.com

Diabetes Risk Prediction Web App

Python, XGBoost, Pandas, Scikit-learn, Streamlit

- Built and deployed a machine-learning web application using XGBoost to predict diabetes risk from patient health indicators.
- Implemented data preprocessing, feature preparation, class-imbalance handling and model evaluation.
- Developed an interactive Streamlit interface for generating predictions from user-provided clinical variables.
- GitHub: https://github.com/Hisrich/Diabetes_ML_Model

SKILLS

Programming: Python, SQL, JavaScript, HTML, CSS

Backend & Web Development: Django, Flask, FastAPI, Rest APIs, SQLAlchemy

Databases: PostgreSQL, MySQL, SQLite

Data Science & Machine Learning: Pandas, NumPy, Scikit-learn, XGBoost, Matplotlib, Seaborn, Power BI, Streamlit

DevOps & Tools: Git, GitHub, GitHub Actions, Docker, Render, Oracle Cloud, Postman

Veterinary & Laboratory: ELISA, Microbial Culture, Light Microscopy, Biochemical Assays, Veterinary Practice

Languages: English, Fante, Twi

CERTIFICATIONS & COURSES

- Google Advanced Data Analytics – Coursera **Mar 2025**
- Intermediate Machine Learning – Kaggle **Nov 2024**
- Infectious Disease Transmission Models for Decision-Makers – Coursera **Oct 2024**
- Python Programming – Slightly Techie School **Sep 2024**

LEADERSHIP & VOLUNTEERING

- Slightly Techie Community Volunteer **Sept 2025**
- Anti-Rabies Awareness Campaign (KNUST) - Organizer **Apr 2025**
- COVID-19 Ambassador - Swedru Municipal Hospital **May 2020 - Oct 2020**

PROFESSIONAL & ACADEMIC MEMBERSHIPS

- Python Ghana – Member
- Ghana Veterinary Medical Association - Member
